Dear Hiring Manager at Bank of New Zealand,

I'm writing to express my interest in the Data Engineer position at BNZ. I am a Data Engineer with proven experience in developing and maintaining data infrastructure across Snowflake using dbt.

In my current role at Harmoney, and previously at Laybuy, my responsibilities span across multiple domains of data analytics, including developing and maintaining data pipelines, building data models, as well as working closely with cross functional teams, namely Product and Funding team to deliver insights, supporting business decisions. In my role I've worked mainly with Snowflake and its supporting tools, namely ETL/ELT tools like Hevo, Stitch or Hightouch, to AWS S3, DataRobot, Tableau, as well as developing in Python through Streamlit or Airflow.

I'm drawn to this opportunity as I am inspired by BNZ's mission in supporting kiwis. I believe with my skillset and can-do attitude, I am the right fit for your team.

Thank you for considering my application. I look forward to discuss how I can contribute to BNZ data platform goals.

Regards,

Chris.
